

# Storey Lab

*Lewis-Sigler Institute for Integrative Genomics*

♡ Statistics — Genomics ♡

*@storeylab*

# Focus of the Lab

- Characterizing genomic variation
  - nucleotides (genetic variation)
  - gene expression
  - epigenetics and chromatin
- Role of genomics in molecular and trait variation
  - genetics of gene expression
  - genetics of complex traits
- Statistical theory, methods, and algorithms for high-dimensional data
  - inference on many parameters simultaneously
  - accounting for latent variable structure

# Find Us

## On the internet:

<http://genomics.princeton.edu/storeylab/>

<https://github.com/storeylab>

<https://twitter.com/storeylab>

## In person:

Andrew Bass (QCB)

Irineo Cabreros (PACM)

Chee Chen

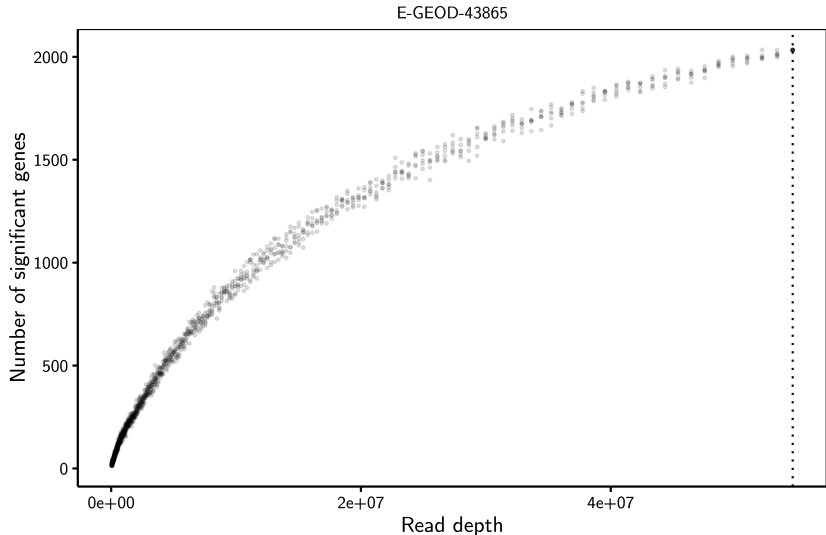

Sean Hackett

Wei Hao (QCB)

Emily Nelson (QCB)

Alejandro Ochoa

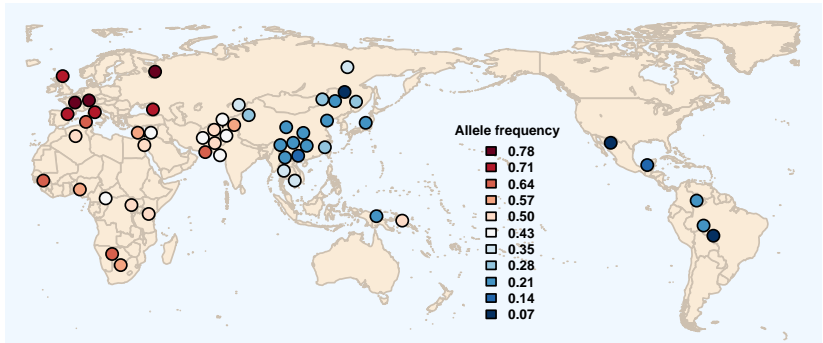

# subSeq: Computationally efficient way to subsample reads

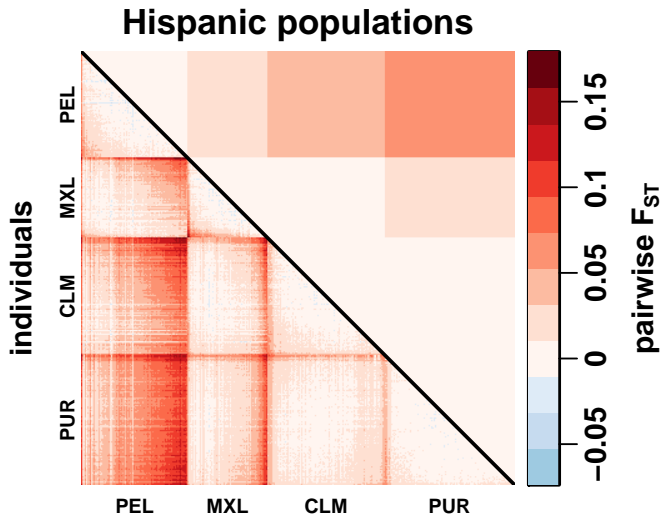

# superSeq: Predicting adequate read depth to maximize statistical power

# Complex Population Structures: Human Genome Diversity Panel

# Differentiation Between Pairs of Individuals: 1000 Genomes Project

# Gene-by-Environment Interactions

Example GxE Plots

# Scale Robustness of Our Method

# New Experimental System
